

103. A system as in claim 82, wherein the information is compressed for transmission over the wireless link in a time slot.

104. A system as in claim 82, wherein the information is modulated onto a carrier frequency for transmission from the first unit to the second unit.

105. A system as in claim 82, wherein data information received in a previous time slot is processed while other data information is transmitted in a reverse direction in a following time slot.

106. A system as in claim 82, wherein the information is encrypted for transmission over the wireless link in a time slot.

#### REMARKS

Claims 1-106 are pending in the present reissue application. Claims 1-4 were previously allowed and are not being amended by way of this preliminary amendment. Claims 5-106 are new claims being submitted for examination in this reissue application. Support for the new claims can be found in the accompanying document entitled STATEMENT OF STATUS AND SUPPORT FOR ALL CLAIMS. No new matter is being added by way of this amendment.

It is believed that original patent U.S. Patent 5,982,764 is wholly or partly inoperative or invalid because the patentee claimed less than he had a right to claim in the patent. Hence, this is a broadening reissue application in view of newly added claims 5-106.

CONCLUSION

It is submitted that all claims are in condition for allowance, and it is respectfully requested that the application be passed to issue. If the Examiner feels that a telephone conference would expedite prosecution of this case, the Examiner is invited to call the undersigned Attorney at (978) 341-0036.

Respectfully submitted,

HAMILTON, BROOK, SMITH & REYNOLDS, P.C.
